### **Dispensing technology for all composite applications from a single source DOPAG will present its range of products for the production of composite materials at JEC World in Paris, the world's largest composites exhibition**

The applications involved in the production of composite components are complex. For this reason, it is vital that the metering and mixing technology used in the production process guarantee absolute precision and reliability. DOPAG developed special metering systems for the production of composite components, which enable optimal processing of these complex materials and also meet the demand for increasing automation. DOPAG offers metering and mixing systems for all composite applications from a single source, ranging from adhesive bonding and sealing to filament winding, RTM, and infusion and pultrusion. Customers can meet DOPAG's experts and learn all about the product range at the world's leading exhibition for the composites industry, from 3 to 5 May, at JEC World in Paris. DOPAG's exhibition stand is located at Hall 6, Stand E72.

#### **Reliably processing polyurethane and epoxy resin**

The metering and mixing systems process single- and multi-component materials such as polyurethane, polysulphides and epoxy resin precisely. Reliable, replicable application is guaranteed at all times. This makes it suitable for use in all industries. DOPAG systems are used in any field where lightweight design is important. This includes the automotive and e-mobility industries, the aviation and space industries, and in the construction of wind turbines. DOPAG custom-makes all metering and mixing systems precisely to its customer's requirements and configures them accordingly.

#### **Benefiting from automated solutions**

DOPAG offers automated solutions for all composites applications, which enable significant improvements in relation to processing time, reproducibility and material usage. This means that customers can benefit from lower time requirements, increased productivity and reduced production costs in the case of higher quantities.

## **About DOPAG**

We are one of the world's most experienced manufacturers of high-quality metering and mixing technology. Wherever adhesives, resins, silicones or lubricants are metered and applied in industrial production, we offer reliable, precise solutions. We provide systems and components for highly automated production processes, including for the automotive, wind, household appliances and electrical industries, as well as for aviation and space travel.

DOPAG is part of the HILGER & KERN GROUP, a reliable supplier, development and service partner to industrial companies in a variety of market segments for over 90 years. The group employs around 350 people and has subsidiaries and distributors in more than 40 countries.
